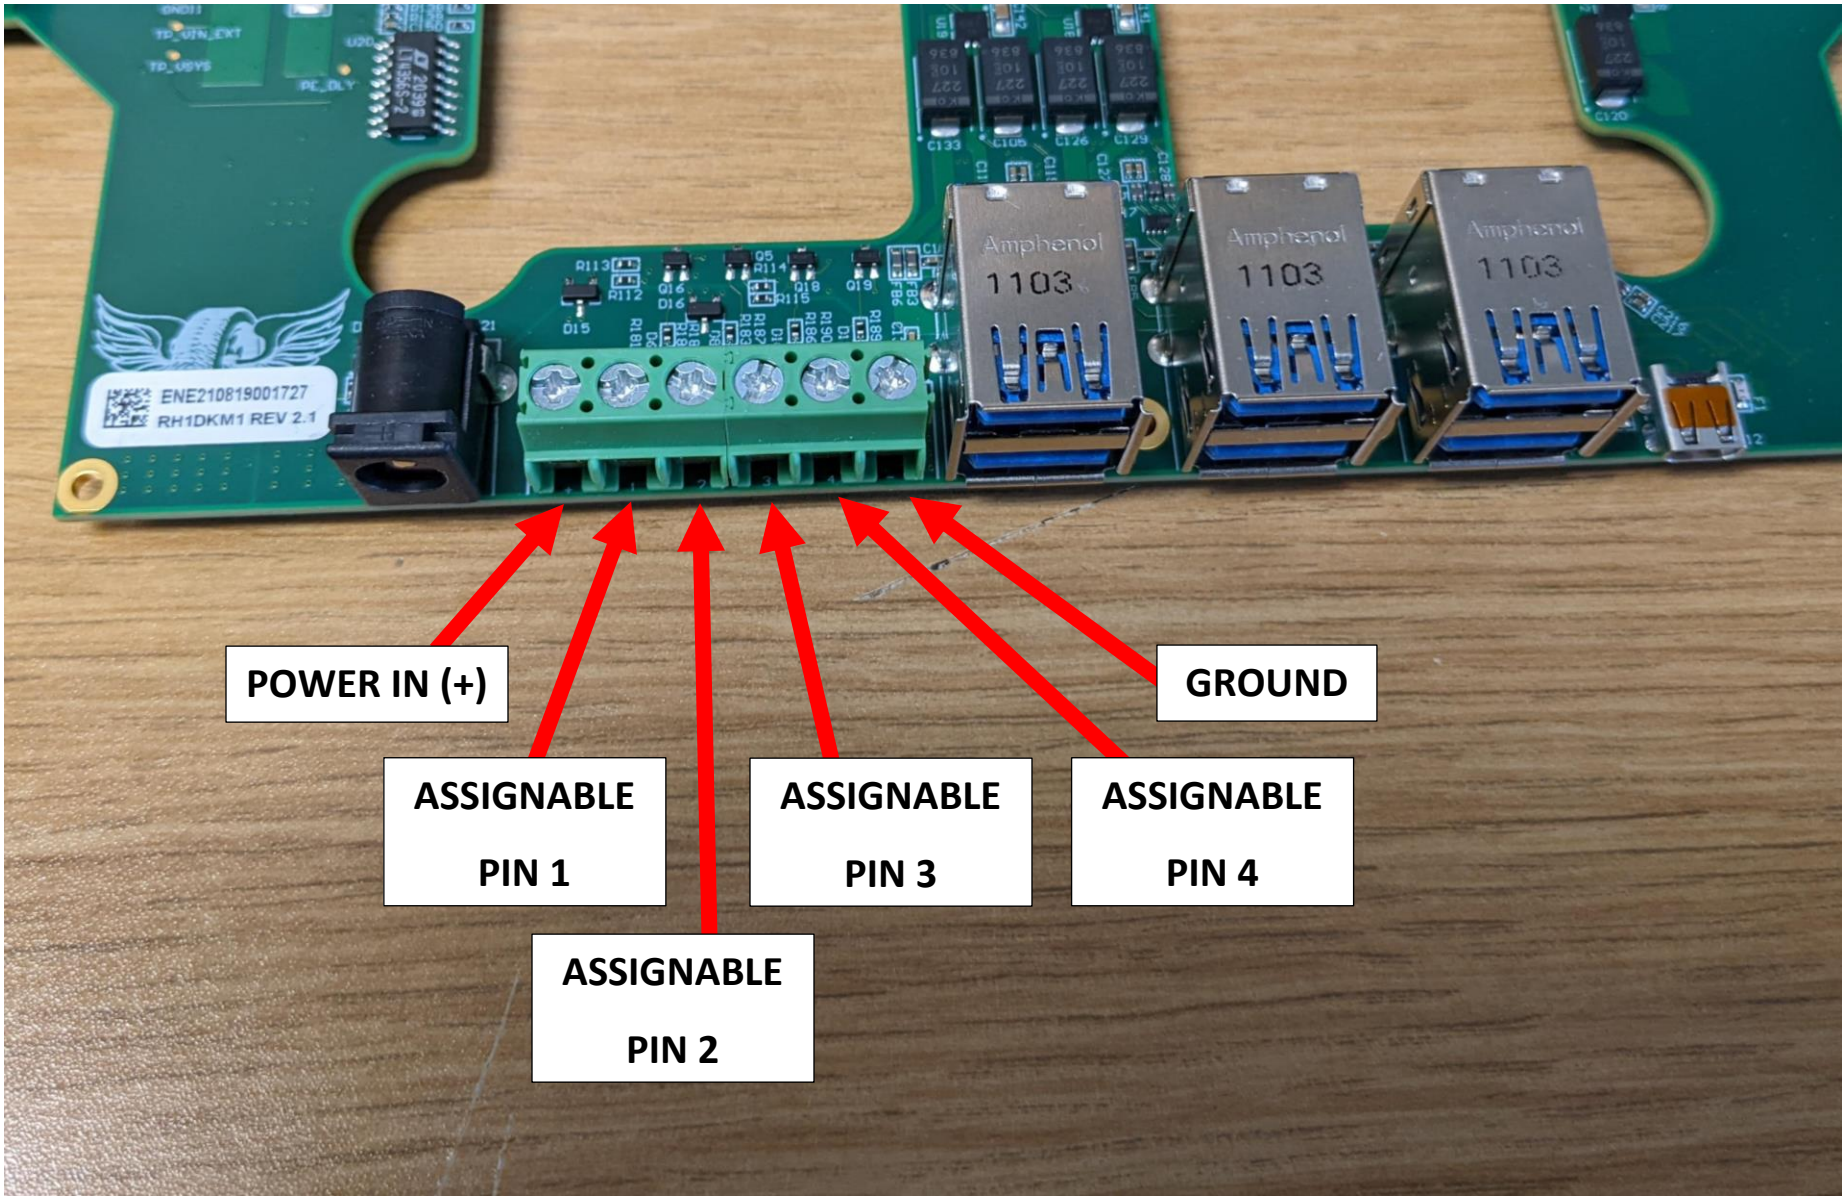
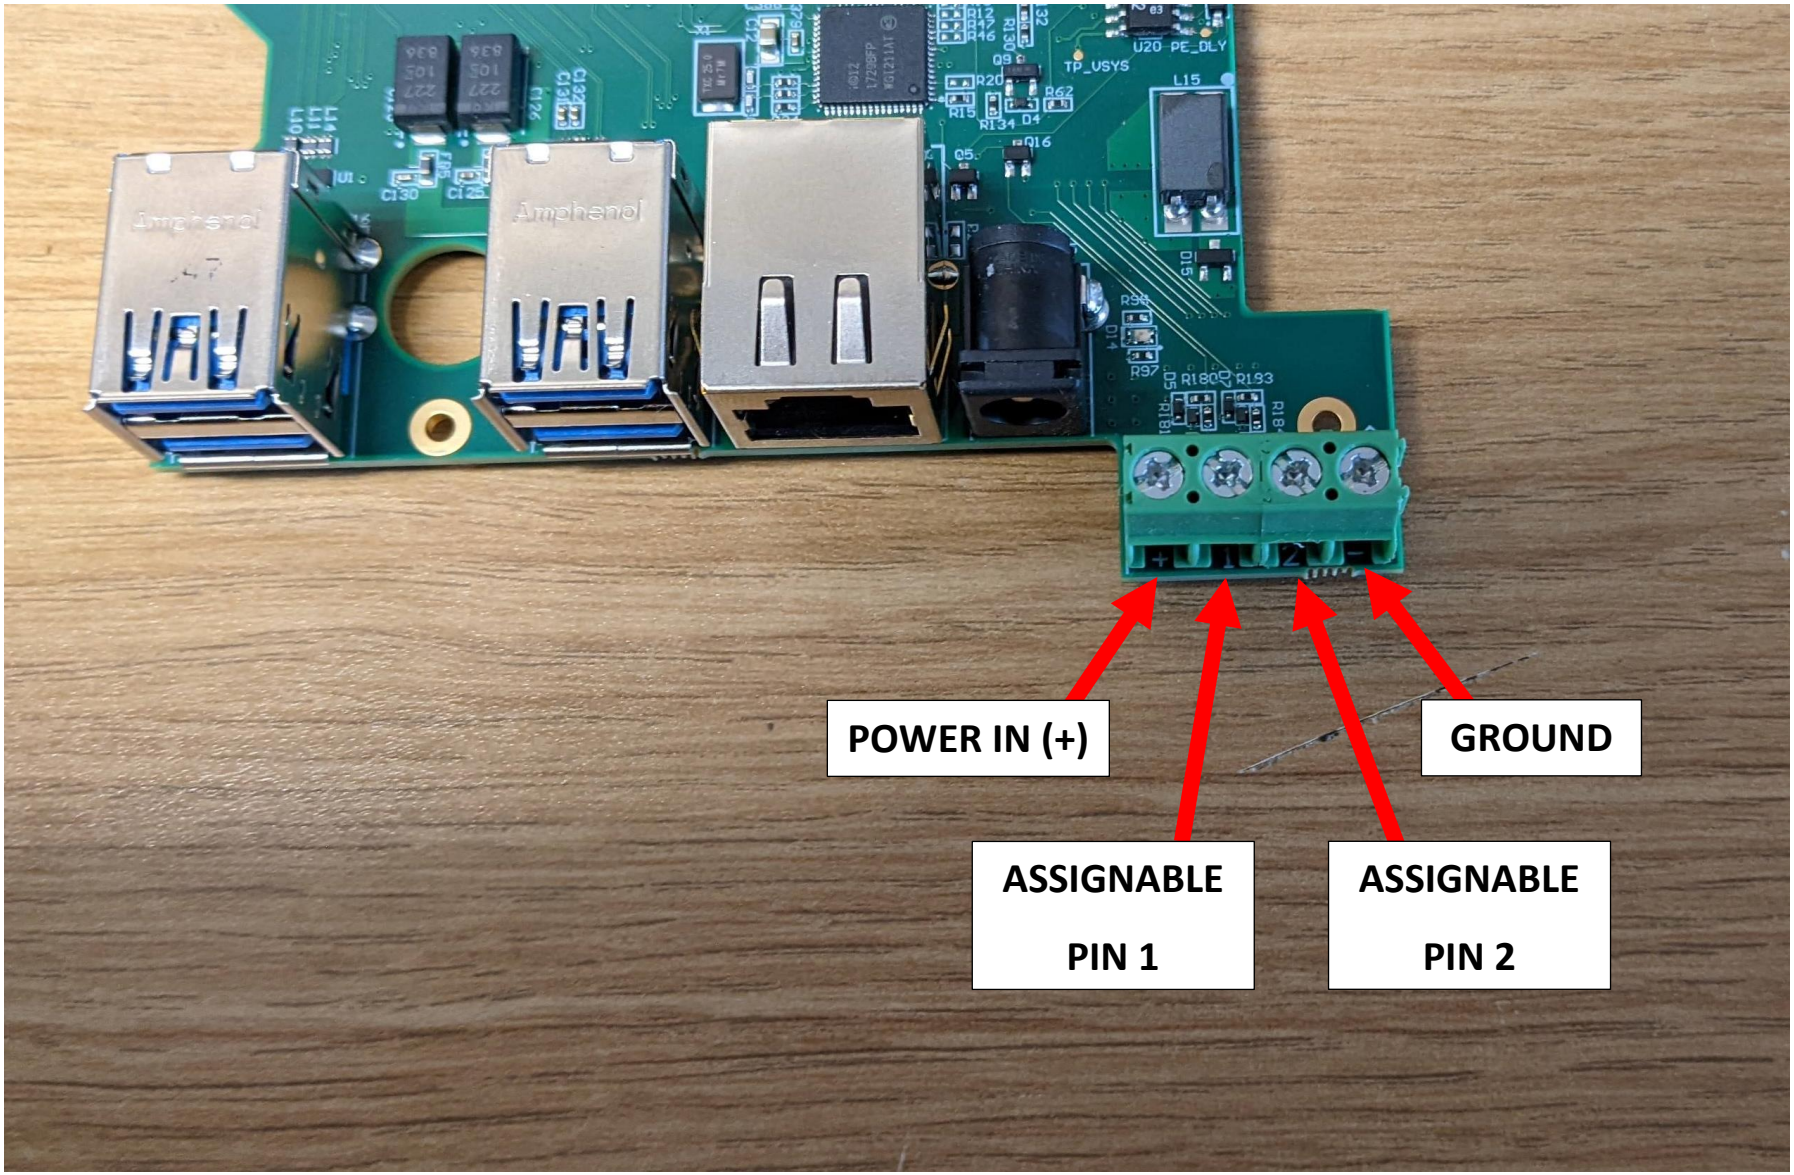
LARGE DOCK TERMINAL BLOCK PIN OUT



Assignable pins are programmable. They can be set to either switchable power outputs (to power a printer for example), or to serve as ignition sensing (tie to a switched power line in the vehicle so the computer knows when the vehicle is on/off). The pin function can be set up in the RTi Control Panel Setup Interface, in the "Input – Output Lines" Tab.

LOW PROFILE DOCK TERMINAL BLOCK PIN OUT



Assignable pins are programmable. They can be set to either switchable power outputs (to power a printer for example), or to serve as ignition sensing (tie to a switched power line in the vehicle so the computer knows when the vehicle is on/off). The pin function can be set up in the RTi Control Panel Setup Interface, in the "Input – Output Lines" Tab.
