Windows 11 Update Process for M1 and M2 Tablets

1. Download the Windows 11 Update Registry fix from the link below:

   https://patrolpc.com/wp-content/uploads/DL/Tools/Windows%2011%20Update%20Fix.zip

2. Download the relevant Windows 11 ISO from the links below:

   Windows 11 IoT Enterprise
   https://patrolpc.com/wp-content/uploads/DL/ISO/W11IoTEnterprise.iso

   Windows 11 Pro
   https://patrolpc.com/wp-content/uploads/DL/ISO/W11Pro.iso

3. Right-click on the "**Windows 11 Update Fix.zip**" file, click "**Extract All…**", then click "**Extract**" again on the following prompt.

4. Open the extracted folder, then double-click the "**Windows_11_Update_Fix.reg**" registry file. If you are prompted with a security warning, click "**Run**". Click "**Yes**" to any other prompts you receive. You should then be prompted with a message that states the keys and values were successfully added to the registry.

5. Restart the computer.

6. **Right-click** on the downloaded ISO file, then click "**Mount**". If you are prompted with a security warning, click "**Open**".

7. A Windows Explorer Window will appear. **Right-click** on "**setup.exe**", click "**Run as Administrator**", then click "**Yes**" to any security prompts you see. This will start the Windows 11 Install Process. From here, you have the option to perform an update to Windows 11 and keep your files, or a clean installation. We strongly recommend a clean installation from scratch to ensure the highest stability and reliability.
